

For when something goes wrong and Minh is not there. Most problems are fixed in a minute with the first section. The rest is for when Minh sends a fix from afar.

First, the quick fixes

- 1 Look it up in the staff guide.** The table *If something goes wrong* in **OPERATORS-GUIDE** covers the camera, the printer, the phone and a frozen screen.
- 2 Restart the booth.** On the staff phone's **Booth** tab, tap **Shut down booth**. Then double-click **START-BOOTH**. If the screen is frozen, close the black Terminal window instead, then double-click **START-BOOTH**.
- 3 Check the camera and printer.** With the booth shut down, double-click **CHECK-BOOTH** and follow its steps.

Telling Minh

Text Minh:

- a photo of the booth screen, and of the black Terminal window
- what happened just before, and what time
- whether a group was in the middle of a session

Never delete, move or rename anything in the **app** folder. The photos and orders are in there.

When Minh sends a fix

Minh can send a new version of the booth from anywhere. Putting it in takes a minute and keeps the staff code, the settings, the photos and the orders.

- 1 Shut down the booth.** On the phone's **Booth** tab, tap **Shut down booth**. No phone? Hold the **top-left corner** of the booth screen for 2 seconds, then tap **Shut down booth**.
- 2 Make sure this Mac has the internet.** If the venue's Wi-Fi has none, turn on a phone's **Personal Hotspot** and join the Mac to it.
- 3 Open the EMERGENCY folder and double-click UPDATE.** If macOS says it *cannot be opened*, right-click it, choose **Open**, then **Open** again.

- 4 **Read what it says** and do what the table says:

It says	What to do
UPDATED	The fix is in. Go to step 5.
NO NEW UPDATE	Minh's fix has not arrived yet. Tell Minh, wait a minute, and double-click UPDATE again.
COULD NOT REACH THE INTERNET	Go back to step 2, then double-click UPDATE again.
THE BOOTH IS STILL OPEN	Go back to step 1.
THE UPDATE DID NOT WORK	Send Minh a photo of the window. Nothing was changed, so the booth still works as before.

- 5 **Start the booth.** If you joined a hotspot just for the update, put the Mac back on the Wi-Fi the staff phone uses. Then double-click **START-BOOTH** and try one session yourself.

If the update made things worse

Open the EMERGENCY folder and double-click **UNDO-UPDATE** . It puts the booth back exactly as it was before the update, and needs no internet. Then double-click **START-BOOTH**, and tell Minh.

Only update when Minh asks you to. Never in the middle of a session: shut the booth down first, and the update tells you if you forgot.
